

Summary

Independent engineer with 1+ year shipping production developer tools at the intersection of AI agents and Git workflows. Built **gfix** (Rust + MCP merge resolver) and **Tubio** (Chrome MV3 SaaS, 4.8★), both live and used by real users. Comfortable across the full stack — from Rust engine internals and Chrome extension service workers to React frontends and Rails APIs.

Technical Skills

- Languages:** Rust, TypeScript, JavaScript, Python, Ruby
- AI / Agents:** Model Context Protocol (MCP), Claude API, OpenAI, Gemini, Ollama, prompt engineering
- Frontend:** React, Next.js (App Router), Tailwind CSS, Plasmo (MV3), HTML5 Canvas
- Browser / Extensions:** Chrome MV3, VS Code Extension API (Marketplace + Open VSX), service workers, IndexedDB, Innertube API
- Backend & Infra:** Node.js, Ruby on Rails 8, Sidekiq, REST APIs, Supabase, Vercel, Docker, Polar
- Git / Systems:** Git internals, rerere, AST-based merging (Mergiraf), worktrees, multi-agent workflows

Experience

Founder & Engineer · [gfix & gitfix](#) Mar 2026 – Present · Mumbai

- ▶ Architected **gfix** — a Rust CLI + MCP server that lets AI coding agents resolve git merge conflicts natively, eliminating the human bottleneck in parallel-agent workflows where multiple agents write to the same codebase.
- ▶ Shipped **gitfix** VS Code extension (Marketplace + Open VSX) with a conflict tree, one-click fixes, and a full per-resolution audit trail — keeping humans in the loop on every agent-driven merge decision.
- ▶ Engineered deterministic AST-level merging on top of Mergiraf, cross-machine rerere-style replay, and a BYO-key AI provider layer abstracting OpenAI, Anthropic, Gemini, and Ollama — all on a private Rust engine.

Stack: Rust · MCP · Mergiraf · VS Code Extension API · Open VSX · Git internals

Founder & Engineer · [Tubio](#) Sep 2025 – Present · Mumbai

- ▶ Built and shipped Tubio end-to-end — a Chrome MV3 SaaS achieving **4.8★** on the Chrome Web Store; downloads YouTube transcripts at volume with metadata and multimodal context the official YouTube Data API doesn't expose.
- ▶ Engineered bulk download of up to 800 videos/session with sequential rate-limiting and IndexedDB persistence that survives MV3 service-worker restarts; bypassed the 2024 PoToken enforcement by reading from the user's authenticated session.
- ▶ Shipped *Watch with Claude* — bundles transcript + evenly-spaced frame captures into a structured `report.md` for full multimodal video ingestion by LLMs; primary differentiating feature driving user retention.

Stack: Plasmo · Chrome MV3 · React · TypeScript · IndexedDB · Innertube API · Supabase · Polar

Web Developer (Intern) · [Trineteini Quantum](#) Jan 2025 – Mar 2025 · Remote

- ▶ Delivered a full admin panel and social-media dashboard for dialclub.org — CRUD surfaces over users, content, and operational state with cross-channel publishing.
- ▶ Built role-based instructor dashboard, event lifecycle management (draft → published), a question-bank-backed quiz module, and a public-facing conversational chatbot.

Stack: React · Node.js · REST APIs · Webhooks

Projects

[scribed](#) · github.com/ameyypawar/scribed 2024

- ▶ Built a self-hostable, provider-agnostic audio transcription microservice for customer-support platforms, with pluggable backends across whisper.cpp, faster-whisper, Deepgram, and OpenAI — swappable via environment variable without code changes.

Stack: Ruby · Rails 8 · Postgres · Sidekiq · Docker · REST

Education

Vidyalankar Institute of Technology, Mumbai 2022 – 2027
