68 merged upstream PRs across 12 open-source projects — OpenObserve (25), gitoxide (24) · Rust, TypeScript

Experience

Open-Source Contributor (Rust backend) — OpenObserve · Aug 2026 – Present
Open-source observability platform for logs, metrics and traces · 22k GitHub stars
25 merged PRs across search, alerts, PromQL and metrics, OTLP ingest, pipelines, compaction and migrations

- Made realtime metric alerts fire once per label set on the remote_write, OpenTelemetry (OTLP) and JSON ingest paths, instead of once per request (#14010, #14085)
- Fixed scheduled pipelines silently skipping records stamped on a window boundary by starting each run where the previous one ended (#15042)
- Fixed a querier panic on PromQL range selectors with no metric name, and stored non-monotonic OTLP sums as gauges instead of counters (#14115, #15113)
- Made SQLite migrations stop on a lost migration history instead of replaying the whole chain, and made failing migrations safe to re-run (#15087)

Open-Source Contributor (Rust, Git internals) — gitoxide · Jun 2026 – Present
Pure-Rust implementation of Git · 12k GitHub stars · 12th-most commits of all contributors
24 merged PRs across Git-compatible parsing, diff and rename tracking, pack compression, transport and error handling

- Made gix-diff rename tracking order-independent and file-name-aware, fixing an intermittent gix-status CI failure and direction-dependent merge results (#2687)
- Made gix-pack honour configured zlib compression levels; pack entries had grown about 50% after the backend switch to zlib-rs (#2695)
- Added Remote::default_branch(), which reads a remote's default branch from refs/remotes/<name>/HEAD without connecting to it (#3037)
- Matched Git's own parser in 9 fixes across refspecs, revspecs, pathspecs, ref names, remote helpers, ignore and attribute files (#2888, #2892)

Open-Source Contributor (Rust, TypeScript) — Rust & TypeScript open-source projects · Jun 2026 – Present
19 merged PRs: GitButler (4), Kestra (3), Windmill (3), MCP Rust SDK (2), tokio (2), tower, qdrant, Mastra, LlamaIndex, MCP servers

- tokio: fixed the current-thread runtime skipping its timer and I/O driver when before_park scheduled work, a regression from two 1.50 changes (#8222)
- MCP Rust SDK: made AsyncRwTransport::receive cancel-safe, so busy stdio servers no longer drop incoming requests (#947)
- GitButler: restored self-hosted GitLab support by honouring the project's forge_override in Rust forge resolution (#14620)

Core Maintainer — VOSS Labs · Jun 2025 – Present
Student-run open-source lab building the college's software; work began with VFORUM in Jun 2025

- Built elective rosters for verp, the college ERP (Next.js, TypeScript, PostgreSQL), so marks, locking, publishing and attendance count only enrolled students (#119)

Web Systems Developer (Intern) — Trineteini Quantum · Dec 2025 – Mar 2026

- Built the admin panel, organisation management, and the student and maintainer dashboards for dialclub.org, an ed-tech platform (React, Node.js, REST APIs)

Projects

- **gfix & gitfix** (gfix.space, Mar 2026 – Present) — Rust CLI + MCP server and VS Code extension that let AI coding agents resolve Git merge conflicts, with a conflict tree, one-click fixes and a per-resolution audit trail. v1.0.0: 44 VS Marketplace installs, 922 Open VSX downloads
- **Tubio** (tubio.pro, Sep 2025 – Present) — Chrome extension that bulk-downloads YouTube transcripts with metadata, up to 800 videos a session, keeping progress in IndexedDB across service-worker restarts. 343 users, 4.4/5 from 24 Chrome Web Store ratings
- **Pluck** (github.com/ameyypawar/pluck, 2026) — MIT-licensed Chrome extension that detects lists on any page and exports them to CSV; deterministic, no AI
- **scribed** (github.com/ameyypawar/scribed, 2026) — Self-hostable speech-to-text microservice with pluggable providers (whisper.cpp, faster-whisper, Deepgram, OpenAI) and signed webhooks with retries; Ruby on Rails 8, Sidekiq

Education

University of Mumbai — BTech, Electronics and Computer Science · 2022 – May 2027 (expected)

Skills

Languages: Rust, TypeScript, JavaScript, Python, SQL, Ruby
Observability: Logs, metrics and traces, PromQL, OpenTelemetry (OTLP), Alerting, Vector Remap Language (VRL)
Git & systems: Git internals (packfiles, refspecs, revspecs, rename detection, transport), Async Rust (tokio), Model Context Protocol (MCP)
Web & tools: React, Next.js, Node.js, PostgreSQL, Chrome extensions (MV3), VS Code extension API, Docker
